

FLO 1

Aeronamics developed a hydrofoiling sailboat which makes the foiling experience available to a wide group of sailing enthusiasts.

The Flo1 is spectacular and easy to sail.

We asked our water sports friends how they would like to sail a hydrofoiler and what is important to them.

Simplicity, durability and high speed were the answers we received most.

The result is the ultimate sailboat: The Flo1 features a very stable hull form that performs very good in non-foiling mode as well.

Super easy launching, fool proof sturdy structures, a very large speed potential, and a lot of fun!

The result is an eye turning design using durable materials and the patented DSS technology.

With a strong distribution and service network to secure that your Olympian rush feeling is care-free and lasting forever.

The Flo1 is produced in our business place in Doetinchem, The Netherlands. Using the latest technologies in boat building and aerodynamic analyses. Powered by Qconcepts Design & Engineering.
